

# “Systems Thinking & Collective Intelligence On System/Service Design”

## The Unconference Discovery Dialogue

A one-day (8:30am to 3:45pm) self-organizing conference that extracts the collective intelligence of 200 to 300 participants from across the *Health Link Partners* -- including "the whole system in the room" (i.e. all perspectives present)

**Ted Ball** will provide participants with a best practice complex adaptive system design filter for people to think systemically as they talk together over the day about how the *Health Link* can succeed in achieving its purpose.

**Misha Glouberman** will facilitate a self-organizing *Unconference*, using a systems thinking filter that will extract break-through thinking and collective intelligence about how the *Health Link* can succeed.

Within 24-36 hours of your *Unconference*, each participant will receive a ***Conference Summary Report*** that captures what they, and their colleagues think we should do -- in order to succeed in achieving our purpose as a *Health Link*.

For an example of such a report, see **[Open Space Forum On Primary Care In Alberta](#)**.

Call **Ted Ball** @ **416-581-8814** to explore "fit".
